Consulting Services for phpMyAdmin

Report - December 2020

Overview

Over the month of December 2020 my amount of work was variable. I handled issues and pull-requests and made some code improvements. Also did work on the Debian packaging before the Debian 11 freeze.

First week (week number 50)

I did some code improvements and worked on having reproductible builds from source.

Second week (week number 51)

Some preparation for the QA_5_1 series.

Third week (week number 52)

On the docker repository I did merge all the work pending and made some documentation improvements.

Fourth week (week number 53)

This week was focused on getting the latest version of phpMyAdmin into next Debian version before the freeze. I did make some changes to update the version and comply to the Debian policy.
