Consulting Services for phpMyAdmin

Report - August 2022

Overview

Over the month of August 2022 I fixed issues and updated documentation about the Docker image.

First week (31)

On the docker repository I made some coding standard improvements. And made documentation improvements by adding missing new Docker ENVs to our embed documentation.

Second week (32)

On the docker repository I made some documentation improvements and also made some changes on our embed documentation. I did changes on our server to add more storage on the Sentry instance.

Third week (33)

I worked on fixing a JS error (issue #17620) and that ended up in multiple fixes around the "Debug SQL" console feature. Also fixed a JS errors on the Designer (issue #17543 and issue #17546). And fixed some translation strings.

Fourth week (34)

Not on the project

Handled issues

- #17693 I cannot add enum VALUES
- #17696 Caprover - phpMyAdmin default login details
- #17700 implode(): Invalid arguments passed - Warning in ./libraries/classes/InsertEdit.php#1765
- #17687 Despite running composer update, error still showing autoload.php is missing
- #17546 Uncaught TypeError: Cannot read properties of undefined (reading 'trim')
- #17543 Uncaught TypeError: Cannot read properties of undefined (reading 'length')
- #17585 phpMyAdmin returning empty after apt upgrade
- #17643 bigint data will lose accuracy in json
- #17622 How to install a definite version?
- #17639 Blank page
- #17685 Page-related settings modal: Close button missing "X"
- #17682 Error 500 with no reason and a lot of error in the website.
- #17674 JavaScript error
- #17670 Uncaught TypeError: method_exists(): Argument #1 ($object_or_class) must be of type object|string, bool given
- #378 Allow setting MAX_EXECUTION_TIME for Docker Containers
- #374 Why this version of php-fpm build without nginx?
- #379 Custom themes not working in 5.2
- #383 Change error-handling from exceptions to returning a boolean
- #17701 Data missing in phpmyadmin but in mysql command line returns it
- #17620 Cannot read property 'AlwaysExpand' of null

Commit list

phpmyadmin/phpmyadmin (GitHub)

- aac8f054f2 - Adjust the check release excludes script
- ff7506d13b - Rename jest.config.js to jest.config.cjs in create-release.sh
- ae7f8c4ce0 - Merge branch 'origin/QA_5_2'
- b5e20ad8f4 - Add a ChangeLog entry for #16418
- 9278aeeba5 - Merge #17719 - Fix removing vendor folders (FAQ 1.44)
- bc9b43ebe0 - Remove non needed yarn install on build release step
- 3d6a198598 - Fix CI version to have a valid composer.json
- 050c5682af - Update FAQ 1.44
- 278eb797bc - Remove tcpdf autoloaded files
- 2fff5f48bc - Add a security to check if all files present in the autoload class map can be found and re-generate the class map

- 01724139b2 - Add the version to composer.json at release build time
- a4d273f5cf - Add a ChangeLog entry for #17736
- 8331b15243 - Fix #17736 - Add utf8mb3 as an alias of utf8 on the charset description page
- 4e08ffdc77 - Add a comment when building a kit starts on the release script
- 9477d1d748 - Fixup removing 'po' folder in the english kit
- eac7356f4c - Remove rm "-f" argument as it hides errors on the release script
- a267ba3dde - Add comments to the release script
- 94f0d931cd - Remove rm for '.jshintrc' removed afterwards for all non dev kits
- cc35f885ee - Remove old travis-ci rm in the release script
- aea6bdd329 - Remove non usefull recaptcha "vendor/google/recaptcha/src/autoload.php" file
- db1e59a541 - Remove template test files from non source kits
- 9722d75225 - Adjust build excludes for paragonie/random_compat and paragonie/sodium_compat
- 7b1b42fa0c - Search for files that contain "phar" in the name as they may be build files
- f46b384ad4 - Update baselines
- cedfbd5376 - Add a ChangeLog entry for 6230c197dd
- 6230c197dd - Fix PHP warning on GIS visualization when there is only one GIS column
- 6764066c5e - Support snapshot builds for check release excludes

Week 31

- ff0b2d86c9 - Translated using Weblate (French)
- 75458147a3 - Merge branch 'QA_5_2'
- ebf4a09378 - Document missing Docker ENVs PMA_CONTROL{HOST,PASS,PORT,USER} and PMA_PMADB
- 74958633c2 - Document missing Docker ENVs PMA_QUERYHISTORYDB and PMA_QUERYHISTORYMAX
- eaf60bc9d1 - Document missing Docker ENV MAX_EXECUTION_TIME
- ca294bcec9 - Document missing Docker ENV MEMORY_LIMIT

Week 32

- 7faf6a53ec - Fix Docker mount path for custom themes
- f714d97fb2 - Update the documentation to use the Docker official repository
- 5c4d86df39 - Fix wrong link to download latest source on QA_5_2 documentation

Week 33

- 848f965db4 - Fix merge mistake for renamed JS variable "window.Messages."
- 9c72103931 - Change "Count" for "Count:" and "Time taken" for "Time taken:" on SQL debug console
- 249eaffae7 - Fix merge mistake in Console init
- 9757b09dc8 - Merge branch 'QA_5_2'
- 306bb2e8f6 - Add ChangeLog entries for #17543 and #17546
- c9ea616ece - Fix #17546 - Unregister the modal success on click event to avoid modals calling the previous one
- abb871be89 - Add back some dev comments on Designer objects
- e5dcb1e33a - Fix #17543 - JS error on saving a new designer page
- 9361da6d22 - Add ChangeLog entries for #17620, a9356e4d16, 2365ec78e2, d0093468d0, 8b99611988
- 8b99611988 - Fix console toolbar render when bookmark feature is disabled and sql debug is enabled
- d0093468d0 - Fix escaping of SQL query and errors for debug console
- 2365ec78e2 - Fix debug queries console broken query time and group count
- a9356e4d16 - Fix #17620 - Fix callbacks of Functions.configGet if there is an error and better handle error messages

phpmyadmin/website (GitHub)

- ac45efb7df - Document 5.2
- 989ad3e23e - Use actions/checkout@v3

phpmyadmin/sql-parser (GitHub)

- b1315e0b33 - Update psalm baseline
- d4cf63afe5 - Use composer scripts on GitHub workflows
- 8fc323ebdc - Add composer scripts from the main repository
- 6e34c69c98 - Update phpstan baseline

Week 32

- 233788b0b8 - Ref #384 - fix ContextTest::testLoadError
- d3c0ccda48 - Add a CHANGELOG entry for #384
- 9b6be667cb - Merge branch 'master' into 6.0.x

phpmyadmin/docker (GitHub)

Week 31

- 0ed2e6651b - Apply some coding standard rules on config.inc.php
- df4d08c1a8 - Add a missing CHANGELOG entry
- 0c9a5f06d5 - Fix a typo in the README

Week 32

- 905cae841e - Update the examples to have something more explicit for Docker command line examples

docker-library/docs (GitHub)

Week 32

- 3ed73ef425 - Upgrade actions/checkout to v3
- f55c7f8894 - Add permissions on ci GitHub workflow
- 6372937f8f - Update the phpMyAdmin image docs

docker-library/official-images (GitHub)

Week 32

- fe777105ab - Update the phpMyAdmin image

phpmyadmin-team/phpmyadmin (GitLab)

Week 35

- cce420619f - Update d/changelog
- 5c2ecb2e58 - Depend on libjs-jquery-tablesorter

phpmyadmin-team/tcpdf (GitLab)

Week 32

- 42c0869734 - Send 6.5.0+dfsg1-1 to unstable
- 681556ea0b - Update d/changelog
- fba6f02597 - Run "wrap-and-sort"
- c8e50249d7 - Bump Standards-Version to 4.6.1
- 017906d165 - Update d/changelog
- e76f2567a6 - Merge tag 'upstream/6.5.0+dfsg1' into debian/latest
- 0e68fb84d6 - New upstream version 6.5.0+dfsg1
