Consulting Services for phpMyAdmin

Report - March 2021

Overview

Over the month of March 2021 my main focus was closing issues and pull-requests. I also improved some code, wrote fixes and more tests. And upgraded our error reporting server to Cake PHP 4.

First week (week number 09)

My focus of the week was migrating to Cake PHP 4 our error reporting server. I also did fix issues and merge pull-requests. And wrote and improved tests to add more coverage.

Second week (week number 10)

This week started with finishing the Cake PHP migration. I also worked on bug fixing and pull-request review. On the main repository I made some code improvements and worked on the release script to get it clean. Quite a bunch of issues where closed after the issue cleaning I did all the week.

Third week (week number 11)

I made some error reporting server fixes and handled JS errors. Also worked on our snapshot process that I improved by adding a prefix to the version. I did some research about how I could speed up the client loading resources part. And finally I worked on the error reporting modal and found way to load it at all times and get the issue fixed.

Fourth week (week number 12)

This week I closed more issues and merged some pull-requests. Worked on build reproducibility and wrote a CLI to write revision-info.php files. Also did make bug fixes and removed a near to useless js lib.
