Consulting Services for phpMyAdmin

Report - September 2025

Overview

In September I worked on our infrastructure and Scrutinizer. And merged some contributions. Plus sent updates to our Debian packages.

First week (36)

I upgraded the mail VM from `bookworm` to `trixie`. I then had a mailman web upgrade issue, duplicate emails (casing issue) for some users. After fixing that I managed to finish the upgrade. I disabled a cron for the `ircbot` that is not used anymore. And did some configuration work on "DMARC mitigation" for all the phpMyAdmin lists.

On motranslator

- 4ac3205cab - Improve the exception when the APCu extension is not enabled or installed
- 8f162cb8fd - Add permissions to GitHub workflows token and 973e7745c0 - Delete old stale bot config

Debian packaging

I did some cleaning up and uploaded motranslator as `5.4.0-2`.

And for `phpmyadmin` I sent `4:5.2.2-really+dfsg-2` to unstable after updating a source file to fix `CVE-2025-3573` and fixing tests for PHPUnit 12.

- 73bcccae78 - CVE-2025-3573 - Update jquery.validate.js to 1.21.0 (in sync with 5.2.2)
- 85505ecbb3 - Update tests to run on phpunit 12

Second week (37)

- I fixed the example on the README of `twig-i18n-extension`: 5bb71fdb70 - Fix the example.

I merged some pull-requests:

- e73dbd251c - Merge #19612 - Fix #19611 - restore text operators order
- ae27e63d8e - Merge #19621 - Fix #19109 - Do not enforce character encoding when checking roles
- 5df6629ff3 - Merge #19089 - Fix #18472 - responsive table edit-box in rtl mode
- b78182d8ac - Merge #19088 - Fix #18437 - SQL editor's alignment in rtl
- e903b739a7 - Merge #19860 - Fix #19859 - Fix deprecated null array offset
- 03961f50df - Merge #19861 - Rename PHPMyAdmin to phpMyAdmin

And spent some time on fixing Scrutinizer builds, and enabling QA to have builds too:

- 5781a2a149 - Adjust php compilation options on Scrutinizer to have all PHP extensions needed
- 4c9519c2bc - Force composer 2 and fix PHP 7.2 compilation
- b0fa42e042 - Update Scrutinizer to Ubuntu jammy
- c0feb46b8e - Use NodeJS 20 at Scrutinizer (they use nvm) and use Ubuntu Noble for a newer glibc
- 1337a60510 - Use NodeJS 23 for Scrutinizer only

Third week (38)

I wrote some documentation updates:

- 1c77941bb2 - Improve the upload progress FAQ
- 51b2069f07 - Ref #19594 - Better document required PHP extensions
- d713b89050 - Fix #19594 - Document new required extensions

Fourth week (39)

Nothing to report

Commit list

Week 37

- 5bb71fdb70 - Fix the example

Week 39

- c36141f81c - Fix #16 - Direct use of Node is deprecated

phpmyadmin-team/phpmyadmin (GitLab)

Week 36

- d0c8ddef06 - Send 4:5.2.2-really+dfsg-2 to unstable
- 72f88eb126 - d/ch
- 73bcccae78 - CVE-2025-3573 - Update jquery.validate.js to 1.21.0 (in sync with 5.2.2)
- 85505ecbb3 - Update tests to run on phpunit 12

phpmyadmin-team/motranslator (GitLab)

Week 36

- cb64902e56 - Fix the upload to use -3 and not -2
- 0eba1100e0 - Fix with-apcu autopkgtests
- e5824f65ea - Send 5.4.0-2 to unstable
- 2e960c77f8 - Simplify d/watch
- 100afcc7da - d/ch
- 1317b9cdb4 - Also run tests with apcu
- 767f04b5fa - Use phpunit --do-not-cache-result
- 953332ee58 - Fix PHPUnit runs tearDown for a skipped test
- 13ec51adb3 - Bump d/copyright years
- 54374db055 - Drop Salsa CI config file
- 8adf230521 - Simplify Build-Depends constraints
- 7f420f5d56 - Mark as Multi-Arch: foreign

Handled issues

phpmyadmin/phpmyadmin (GitHub)

Week 36

- 19639 - #1366 Incorrect integer value even if entered value is integer

Week 37

- 19785 - `[5.2] Deprecated: Safe\mssql_connect() on PHP 8.4`
- 19859 - [PHP 8.5]: ErrorException: Using null as an array offset is deprecated, use an empty string instead
- 18472 - Wrong Edit Field position on RTL
- 18437 - Query not visible for RTL languages

Week 38

- 19782 - Contribution: WebStack Deployer – GUI for Managing LAMP Stacks with Docker on Windows
- 19771 - Default dark theme

phpmyadmin/docker (GitHub)

Week 38

- 463 - Docker image "Created" date
