Consulting Services for phpMyAdmin

Report - April 2026

Overview

In April I worked on modernizing the sql-parser tests and CI, merged and reviewed a lot of contributions in phpMyAdmin, improved MariaDB compatibility, and did some issues triage.

First week (14)

I worked on sql-parser: I migrated the tests to PHPUnit attributes, added a native type hint, made the data providers static, and refreshed the phpstan and psalm baselines. I merged #631 (build the insert statement using the context's quote style), #636 (desc index lint error), #637 (formatter spacing for the JSON path operators) and #648 (bump zumba/json-serializer), then regenerated the test data.

I also bumped the CI: ramsey/composer-install to v4, codecov-action to v6 using the token method, added the missing workflow permissions, and updated the coding-standard, motranslator, phpstan, psalm and phpbench tools. On Scrutinizer I had to update the base image and composer, and psalm needed a newer PHP.

In motranslator I updated the Scrutinizer base image and the PHP version for psalm, and bumped the GitHub actions. Same for shapefile.

Second week (15)

I merged contributions after reviewing them. This week's phpMyAdmin merges include: skipping the locale directory assertion when the folder is missing (#20268), reducing the simulate-query memory usage (#20238, #18941), skipping the user link for non-real users in the processes list (#20259, #19842), the drag & drop difference between Firefox and Chromium (#20189, #18557), removing the dead Suhosin warning (#20167, #19912), adding the missing length validation when changing a column type (#20267, #19338), fixing the sliding message container overlapping the page content (#20269, #20064), fixing the export for raw queries without a table reference (#20266, #20041), adding a SQL button to the database list (#20210), and updating create-release.sh with the files to exclude (#20250, #20007).

I also fixed the TOON export for the normal user (#20275), made the CSV import turn empty values into NULL (#19381), removed getInnodbPluginVersion() and refactored getInnodbFileFormat() for MariaDB compatibility (#18204), and improved the drag & drop to accept application/x-moz-file.

For sql-parser I merged the Weblate translations, removed the extra spaces in the new 6.x tests, and fixed #609 (attempt to read property "keyword" on null).

I also did some issues triage, including the demo servers being out of disk space and not updated since December 2024.

Third week (16)

A quieter week: I upgraded phpstan to 2.1.47.

Commit list

phpmyadmin/phpmyadmin (GitHub)

Week 15

- 900480ebd1 - Merge #20268 - Fix #20110 - Skip locale directory assertion when folder is missing
- 7ba1db3daf - Add a missing new line for drag drop
- 33c5a2293a - Merge #20238 - Fix #18941 - Reduce simulate-query memory
- 43fd19b79e - Fix #20275 - TOON export should use the normal user
- 2c03905eea - Merge #19802 - Fix #19381 - Implement csv empty to null
- 9d2f4c7247 - Merge #20262 - Fix #18204 - Remove getInnodbPluginVersion() and refactor getInnodbFileFormat() for MariaDB compatibility
- fa168ab7a3 - Add tests for #20262
- 03ef236b57 - Improve: Specifically allow application/x-moz-file as a drag and drop valid case
- 84c971aaa3 - Fixup of: Specifically allow application/x-moz-file as a drag and drop valid case
- 559d94d7aa - Specifically allow application/x-moz-file as a drag and drop valid case
- 10fc2a46b2 - Merge #20259 - Fix #19842 - skip user link for non-real users in processes list
- 2e1b85ae52 - Merge #20189 - Fixes #18557 - Drag & drop difference between Firefox & Chromium browsers
- 10093ffb2e - Merge #20167 - Fixes #19912 - remove the dead Suhosin warning
- 2cb227f125 - Merge #20267 - Fix #19338 - Add missing length validation when changing column type
- c6a7f7f9e9 - Merge #20269 - Fix #20064 - Fix sliding message container overlapping page content

- 0eab757cba - Merge #20266 - Fix #20041 - Fix export for raw queries without table reference
- cea7654274 - Merge #20210 - Add a SQL button to the database list
- 1e80398521 - Merge #20250 - Fix #20007 - Update create-release.sh with file to be excluded

Week 16

- ad78a577c0 - Merge #20283 - Upgrading phpstan/phpstan (2.1.41 => 2.1.47)

phpmyadmin/sql-parser (GitHub)

Week 14

- 5be4eed281 - Use phpunit attributes
- dffcaea3f6 - Use a native type hint in InsertStatementTest
- 3e9ce57f49 - phpunit data providers must be static
- 128db9aac1 - Update phpstan and psalm baselines
- cefa8027ad - Fix after #631
- 0195e948ab - Merge #631 - Build insert statement with context's quote style
- 5b68e01612 - Merge #636 - Fix #592 - desc index lint error
- 16e7632e34 - Regenerate the test data
- 0df2427867 - Bump ramsey/composer-install to v4
- 8d57493b1d - Bump codecov/codecov-action to v6
- 4562caff68 - Add missing permissions to GitHub workflows
- fe8e3bfc6d - Bump action and setup codecov using the token method
- 18730fb735 - Bump phpmyadmin/coding-standard and phpmyadmin/motranslator
- 1f813cf4e1 - Bump phpstan, psalm and phpbench tools
- 3a89a2abf0 - Update phpstan and psalm baselines
- 9433e807c2 - vimeo/psalm needs a newer version of PHP on Scrutinizer
- caf66936b4 - Merge #637 - Fix formatter spacing for JSON path operators (->, ->>)
- 018f3471b3 - Update composer to version 2 on Scrutinizer
- 36d2ded4c9 - Merge #648 - Bump zumba/json-serializer version to ^3.2
- 83886f689d - Update the Scrutinizer base image for PHP 7.2 to work

Week 15

- 2c63257412 - Merge Weblate
- 421432ce03 - Remove spaces from the new tests for 6.x
- 4c45eac1c2 - Fix #609 - Attempt to read property "keyword" on null

phpmyadmin/motranslator (GitHub)

Week 14

- b18bf67b7e - Update the base image for Scrutinizer and the PHP version for psalm
- 0da4abeb1f - Bump GitHub actions

phpmyadmin/shapefile (GitHub)

Week 14

- 04a5812fa2 - Bump GitHub actions

Handled issues

phpmyadmin/phpmyadmin (GitHub)

Week 15

- 19911 - Demo sites aren't working correctly
- 19924 - phpMyAdmin's Demo Website is out of space
- 18400 - Confirm modal for show all rows isn't visible
- 20041 - [Bug]: Export raw query doesn't work due to missing db param in /table/export
- 20064 - [6.0]: Routines container fails to push downward during SQL editing
- 18923 - Elements aren't moving when editor is resized on Routines, Events, Triggers
- 19338 - 'Please enter a valid length!' doesn't show up when changing existing column
- 19912 - [Feat]: Remove Suhosin support and warnings
- 18557 - Drag and drop difference between Firefox and Chromium browsers
- 19842 - [Bug]: Processes list should not link to non-users
- 18204 - Unknown system variable 'innodb_version' since MariaDB 10.10
- 19381 - Make empty values NULL when importing a CSV file

- 20110 - [6.0]: PHPUnit test fails because of missing locale folder on Windows
- 19735 - .
- 20275 - [6.0]: TOON export doesn't work on demo server
- 17896 - Cannot alter Time portion of timestamp directly via grid edit
- 19640 - Safari - Error in processing request
- 19590 - Marquee Selection to designer
- 20270 - .

Week 17

- 18941 - Simulate DELETE in a large table with million of rows gives error 500
- 20287 - [Feat]: Change info order in tab title

phpmyadmin/website (GitHub)

Week 15

- 193 - Demo server session_write_close(): Write failed: No space left on device (28)
- 192 - phpMyAdmin on demo server not updated since 2024-12-18

phpmyadmin/sql-parser (GitHub)

Week 14

- 630 - Avoid back ticks on INSERT INTO columns with mode POSTGRESQL
- 592 - Error validating index with sort order

Week 15

- 609 - [Query] Attempt to read property "keyword" on null
