Consulting Services for phpMyAdmin

Report - September 2026

Overview

In September I merged and reviewed a set of contributions, worked on the CI and code-quality tooling, fixed a couple of search bugs, and did some issues triage. Two weeks, W38 and W39, had no activity.

First week (36)

I merged contributions after reviewing them: fixing an OOM error when creating a view (#20426, #20425), restoring the mutation dashboard reporting (#20431), stripping the port from the host when linking to user privileges in the processes list (#20315, #19841), removing sprintf.js (#20467), fixing an Uncaught ReferenceError for CodeMirror (#20471) and updating the .gitignore (#20472).

Second week (37)

I merged contributions after reviewing them: removing unused getters (#20480), fixing ServerSettingsTest (#20482) and removing the @see declarations (#20483).

I spent the rest of the week on Scrutinizer: their NVM does not carry the NodeJS versions I asked for, so I had to downgrade twice (v23.10.0, then v23). I also added phpstan to the Scrutinizer run, used phpcs directly because "phpcs-run" crashes there, and backported a fix for the infection reports.

I also fixed the INET4 search — quoting the search term for inet4 fields (#20398, #20395) and fixing the search with the = operator (#20474).

Third week (40)

I fixed the jest tests on Windows (#20500).

Commit list

phpmyadmin/phpmyadmin (GitHub)

Week 36

- 2345f83d7d - Merge #20426 - Fix #20425 - OOM error when creating a view
- 99c9da2746 - Merge #20431 - fix: restore mutation dashboard reporting
- e81c6111e0 - Merge #20315 - Fix #19841 - Strip port from host when linking to user privileges in processes list
- beb068afcb - Merge #20467 - Remove sprintf.js
- 55d948539f - Merge #20471 - Fix Uncaught ReferenceError: CodeMirror is not defined
- e3b220da46 - Merge #20472 - Update .gitignore

Week 37

- 9cb26dd407 - Merge #20480 - Remove unused getters
- 6cf52f919b - Merge #20482 - Fix ServerSettingsTest
- 9c7549d551 - Merge #20483 - Remove @see declarations
- 089bfe5f52 - Downgrade Scrutinizer NodeJS to v23.10.0, their NVM does not have v23.11.0 but lists it
- f484d60dc0 - Downgrade Scrutinizer NodeJS to v23, their NVM does not have v24
- 9d06d27306 - Also run phpstan on Scrutinizer
- 228b391070 - Use phpcs directly, it crashes when using "phpcs-run" on Scrutinizer
- af3c8f2316 - Backport cd4e0dae18 for infection reports
- 725a767cc5 - Merge #20398 - Fix #20395 - quote search term for inet4 fields
- 3d2594b2d3 - Merge #20474 - Fix search of INET4 with = operator

Week 40

- 59cf0a622b - Merge #20500 - Fix jest tests on windows

Handled issues

phpmyadmin/phpmyadmin (GitHub)

Week 36

- 20394 - [Bug]: Mutation score

Week 37

- 19841 - [Bug]: Processes list link to users table does not work

- 20425 - [Bug]: Creating or altering a VIEW buffers the view's entire result set into PHP memory, causing a fatal OOM / HTTP 500 after the VIEW was already created
- 17112 - Add Infection badge API key to GitHub secrets
- 20159 - [Bug]: Various JS errors related to empty user-agent

Week 39

- 20486 - .
