Consulting Services for phpMyAdmin

Report - December 2024

Overview

Over the month of December 2024 I did some light work on the project, but to be noted:

- Adjusting the releases script
- Re-building the demo server releases installation
- Some issues sorting out
- Some fixes for 5.2.x

First week (49)

I merged the pull-request #19392 for PHP 8.4 support in `str_getcsv`. And did some issue management.

Second week (50)

I merged the pull-request #19428 to fix column type extraction. And uploaded tcpdf and sql-parser 5.10.2 to Debian.

Third week (51)

- Monday:
  - Added new options to the `create-release.sh` script to allow writing the `revision-info.php` file And to chose the kit and compressions to build. This saves quite some time.
  - Re-built all the script to create the demo server files: commit on the scripts repo
  - Upgraded the demo VM to Debian Bookworm
  - Adjusted the website for the new `versions.ini` data format
- Wednesday:
  - I worked on getting back all the git information into our `revision-info.php` file: PR #19458
  - And removed NVM on the demo VM and installed NodeJS 22 -> TODO: changelog
- Thursday:
  - I worked on the PHPUnit tests for PHPUnit 11 on Debian 13
- Saturday:
  - Some mail-server config adjustments
  - And pruning space on the reports database
  - And I sorted out what I had as unread emails for sql-parser

Fourth week (52)

I uploaded tcpdf and twig-i18n-extension with some minor changes to Debian. And did some issue management.
